## **Full List of Coin-processing Machines Successfully Tested or Declared to Conform**

Article 4 of Regulation (EU) No 1210/2010 concerning the authentication of euro coins and handling euro coins unfit for circulation stipulates that coin-processing machines used for authentication purposes shall have successfully passed a detection test carried out by the designated national authority or by the European Technical & Scientific Centre (ETSC).

The attached list (chapter I) includes coin processing machines that have been successfully tested. Inclusion in the list means that one machine of this type was tested successfully at a given time. This does not guarantee that other machines of the same type function in the same way, as this would depend on a number of criteria, notably the adjustment and the correct maintenance of the machine.

The validity period for a successful test is twenty-four months<sup>1</sup>.

The acceptance criteria applied were those ones defined in the Commission guidelines on the implementation of the Regulation (EU) No 1210/2010. Machine manufacturers were required to set up their machines in standard working conditions.

In addition coin-processing machines are listed (chapter II) which have not passed a detection test but for which a declaration of conformity from the manufacturer was received guaranteeing that a successfully tested coin-processing machine and other coin-processing machine(s) not officially tested, have the same hardware, software and other components used with regard to the detection and rejection of counterfeit euro coins.

<sup>1</sup> According to the ETSC Guidelines - October 2019, machines successfully tested as of the 1<sup>st</sup> of January 2020 have a test validity period of twenty-four months. Machines successfully tested before the 1<sup>st</sup> of January 2020 have a test validity period of twelve months.

# **I: Full list of successfully tested coin-processing machines**

## **Test validity period:**

Twenty-four months from the date of the latest test, for the machines tested as of 1<sup>st</sup> of January 2020.

Twelve months from the date of the latest test, for the machines tested before the 1<sup>st</sup> of January 2020.

## Disclaimer

1. The published table of test results does not certify or guarantee in any way the capacity of the equipment tested to detect counterfeits or to authenticate euro coins and does not imply any recommendation by the ECFIN/ETSC or the CNACs that third parties should use the type of machine tested. Thus, to the extent permitted by applicable law, the ECFIN/ETSC or the CNACs

do not accept any liability whatsoever for any direct or indirect damage resulting from the performance of the tests, the publication, non-publication or removal from the Internet of the test results, or for the tests' outcomes.

2. The ECFIN/ETSC or the CNAC shall not be held responsible for the interpretation potentially made of the results reported or for results different from those observed during the test. Furthermore, the published table does not imply any warranty by the ECFIN/ETSC or the CNACs, whether expressed or implied, that the types of devices tested can detect counterfeit euro coins continuously and without error. This is also the case concerning a machine's fitness for use, or use for purposes other than intended, irrespective of whether the users of the device comply with the user requirements or not.
3. The counterfeit euro coins used for the test reported above shall be, to the best of the knowledge of the ECFIN/ETSC and CNACs, those most commonly found in circulation in the euro area at the time of the last update of the counterfeit families used for testing. Since it cannot be excluded that new types counterfeits appear after the most recent update, it is the responsibility of the manufacturer to regularly retest the detection devices and to make appropriate adjustments and modifications to the detection mechanism in the machine with a view to detecting counterfeits discovered after the date of the test.

## **II: List of machines for which a valid declaration of conformity has been received**

In an effort to avoid excessive administrative procedure and regulatory compliance costs, manufacturers shall be offered the possibility to guarantee conformity for coin-processing machines which have not been tested. By signing the declaration of conformity, a manufacturer guarantees that a successfully tested coin-processing machine, referred to below as "Tested Machine Type", and other coin-processing machine(s) not officially tested, referred to below as "Further Machine(s)", has the same hardware, software and other components used with regard to the detection and rejection of counterfeit euro coins.

The list below contains further machine(s) for which a valid declaration of conformity has been received by the ETSC.
