Forecast errors and forecast biases: Fiscal implications

Lucía Rodríguez Muñoz
Brussels, 12 February 2018

OUTLINE

1. Scene setter

- The economics
- The regulation
- The questions

2. AIReF's approach

- Definition
- Findings
- What's next?

3. IFIs survey

- Main findings

4. Conclusions

1. SCENE-SETTER

1. Scene-setter

- The economics
- The regulation
- The questions

2. AIREF's approach

- Definition
- Findings
- What's next?

3. IFIs survey

- Main findings

4. Conclusions

- Uncertainty is a challenge when it comes to making fiscal policy recommendations:
 - Short term: baseline projections and budgetary impact of policy measures
 - Long term: potential growth, demographics and interest rates
- Uncertainty can be exploited to hamper the effectiveness of fiscal rules.

1. SCENE-SETTER

1. Scene-setter

- The economics
- The regulation
- The questions

2. AIReF's approach

- Definition
- Findings
- What's next?

3. IFIs survey

- Main findings

4. Conclusions

- IFIs have been given a prominent role in this respect.
 - Short term: (i) produce or endorse macro forecasts, and (ii) identify significant biases
 - Long term: internalising uncertainty in the assessment of fiscal sustainability and risks assessment.
- AIReF's been watchful for forecast biases:
 - Presentation shares some of the lessons learned
 - Focuses on short-term

1. SCENE-SETTER

1. Scene-setter

- The economics
- The regulation
- The questions

2. AIReF's approach

- Definition
- Findings
- What's next?

3. IFIs survey

- Main findings

4. Conclusions

- Directive 2011/85/EU:
 - Regular ex post evaluation of macroeconomic and budgetary forecasts
 - If significant bias affecting *macro* forecasts is detected over a period of 4 consecutive years, the necessary action needs to be taken
- Transposition into Spanish law does not provide any further detail

1. SCENE-SETTER

1. Scene-setter

- The economics
- The regulation
- The questions

2. AIREF's approach

- Definition
- Findings
- What's next?

3. IFIs survey

- Main findings

4. Conclusions

- Performing such tasks requires pinning down:
 - What is a forecast bias (as opposed to forecast error)?
 - What is a significant forecast bias (as opposed to a trivial one)?
 - What kind of action should follow the identification of such bias?

2. AIReF's APPROACH

1. Scene-setter

- The economics
- The regulation
- The questions

2. AIReF's approach

- Definition
- Findings
- What's next?

3. IFIs survey

- Main findings

4. Conclusions

- Benchmark for assessing the existence of bias: difference between the government's forecast (G) and the consensus forecast (C)
 - Distribution of the Spanish economy forecast panel
 - EC, BdE, IMF and OECD are left out because release dates do not match
- A bias is considered significant when 3 conditions are met:
 - It is large: falls outside the IQ range of the distribution of the Spanish economy forecast panel
 - It is unjustified ex post: $|G\text{-Outturn}| > |C\text{-Outturn}|$
 - It is persistent: occurs for at least 4 consecutive years

2. AIREF's APPROACH

Magnitude of the bias ('largeness' criterion)

*GDP growth forecast
DBP for 2016*

1. Scene-setter

- The economics
- The regulation
- The questions

2. AIREF's approach

- Definition
- Findings
- What's next?

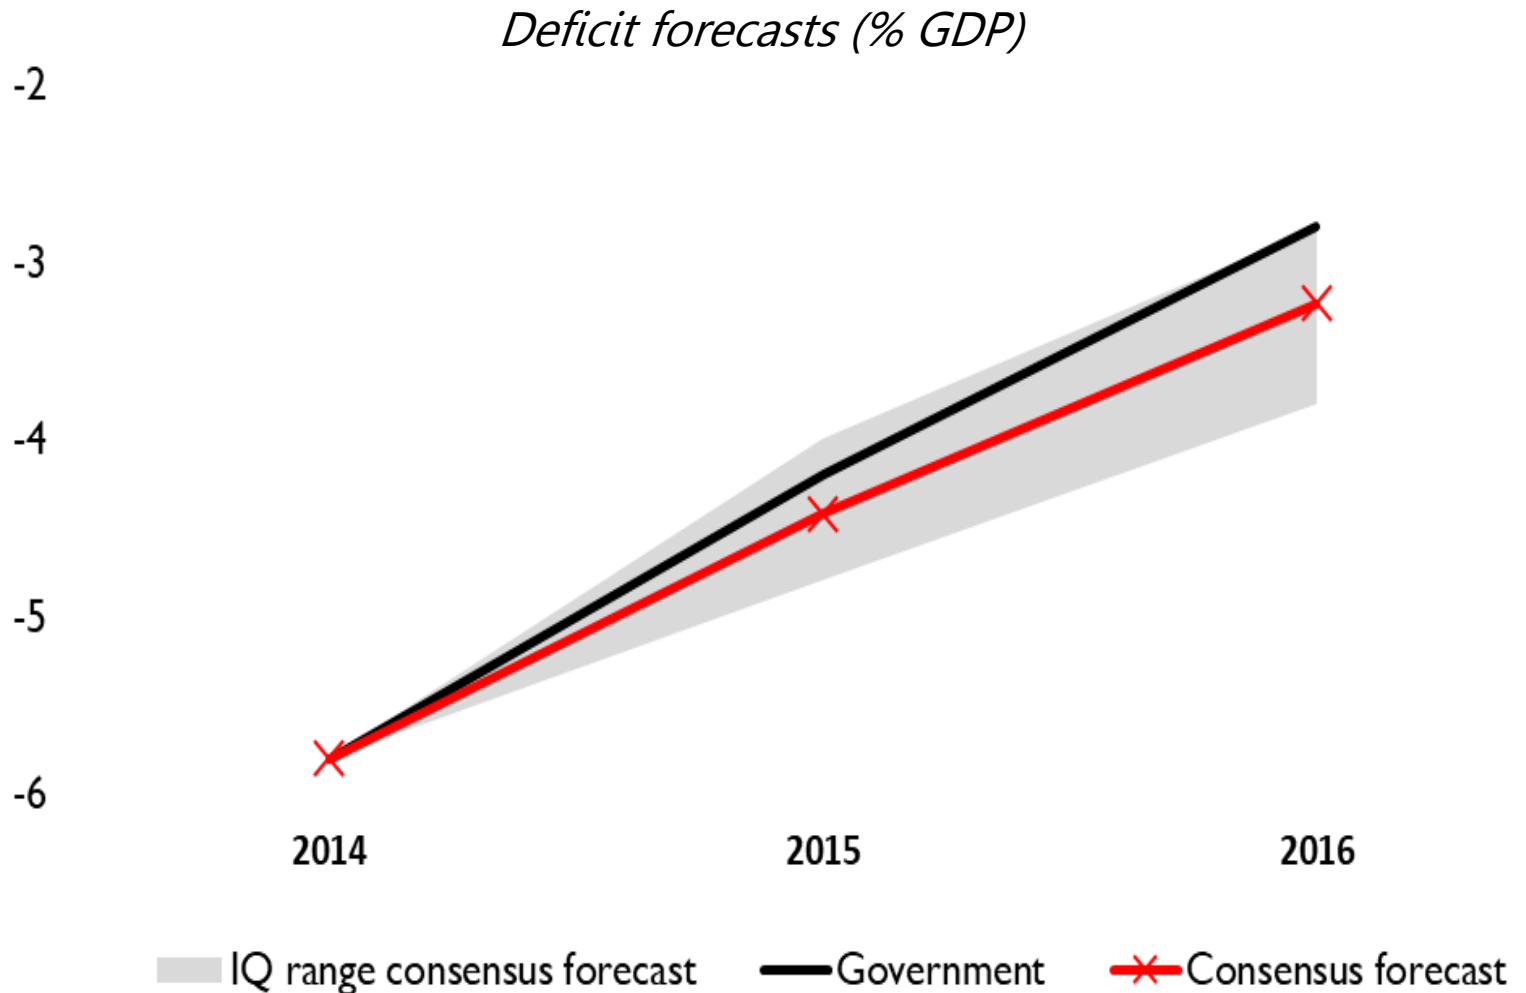

3. IFIs survey

- Main findings

4. Conclusions

2. AIReF's APPROACH

Magnitude of the bias ('largeness' criterion)

1. Scene-setter

- The economics
- The regulation
- The questions

2. AIReF's approach

- Definition
- Findings
- What's next?

3. IFIs survey

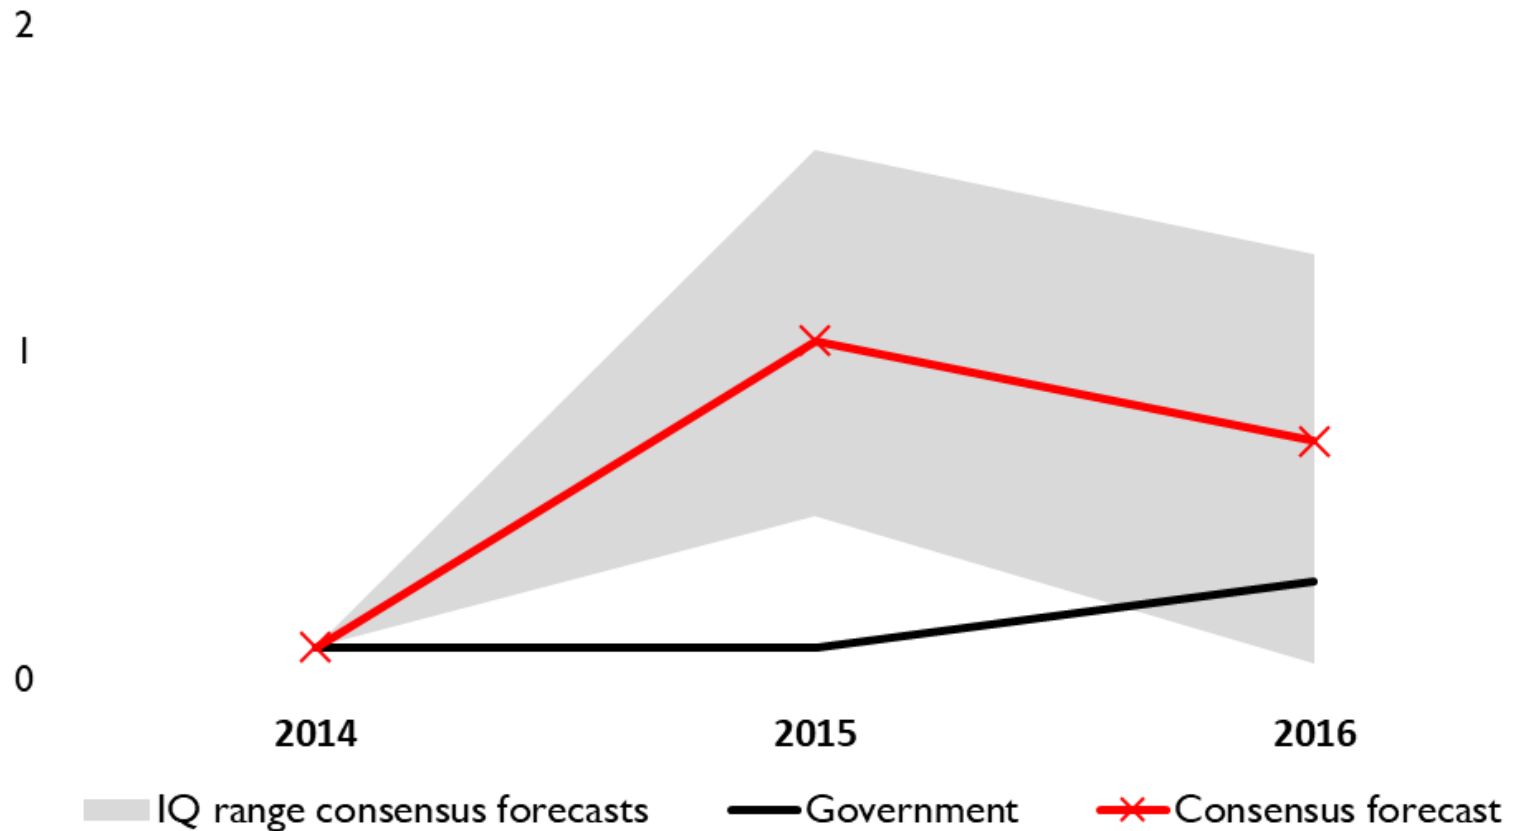

- Main findings

4. Conclusions

2. AIReF's APPROACH

Magnitude of the bias ('largeness' criterion)

*Public consumption forecast (% var)
DBP for 2016*

1. Scene-setter

- The economics
- The regulation
- The questions

2. AIReF's approach

- Definition
- Findings
- What's next?

3. IFIs survey

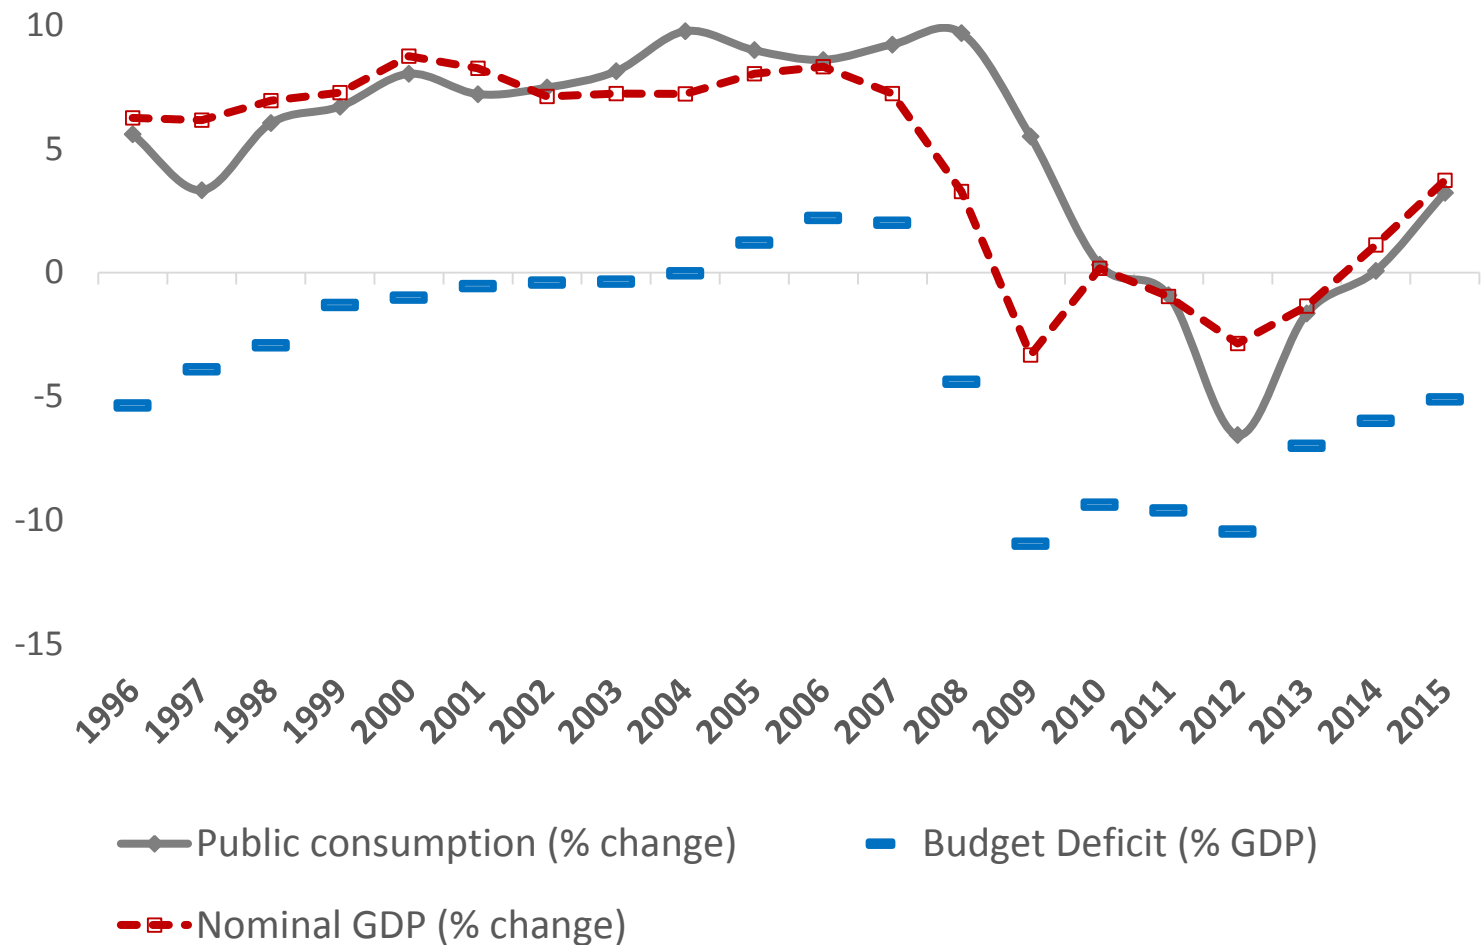

- Main findings

4. Conclusions

2. AIREF's APPROACH

Public consumption is a pivotal variable: macro and fiscal implications

*Public consumption, budget deficit and growth
(outturn data)*

1. Scene-setter

- The economics
- The regulation
- The questions

2. AIREF's approach

- Definition
- Findings
- What's next?

3. IFIs survey

- Main findings

4. Conclusions

2. AIREF's APPROACH

Comparison with outturn data ('justification' criterion)

Except for 2013, government's GDP forecasts were overall cautious. This contrasts with their deficit forecasts

GDP (% var)

Government budget balance (% of GDP)

□ Government error (G-O) ■ Consensus error (C-O) ◆ Bias (G-C)

1. Scene-setter

- The economics
- The regulation
- The questions

2. AIREF's approach

- Definition
- Findings
- What's next?

3. IFIs survey

- Main findings

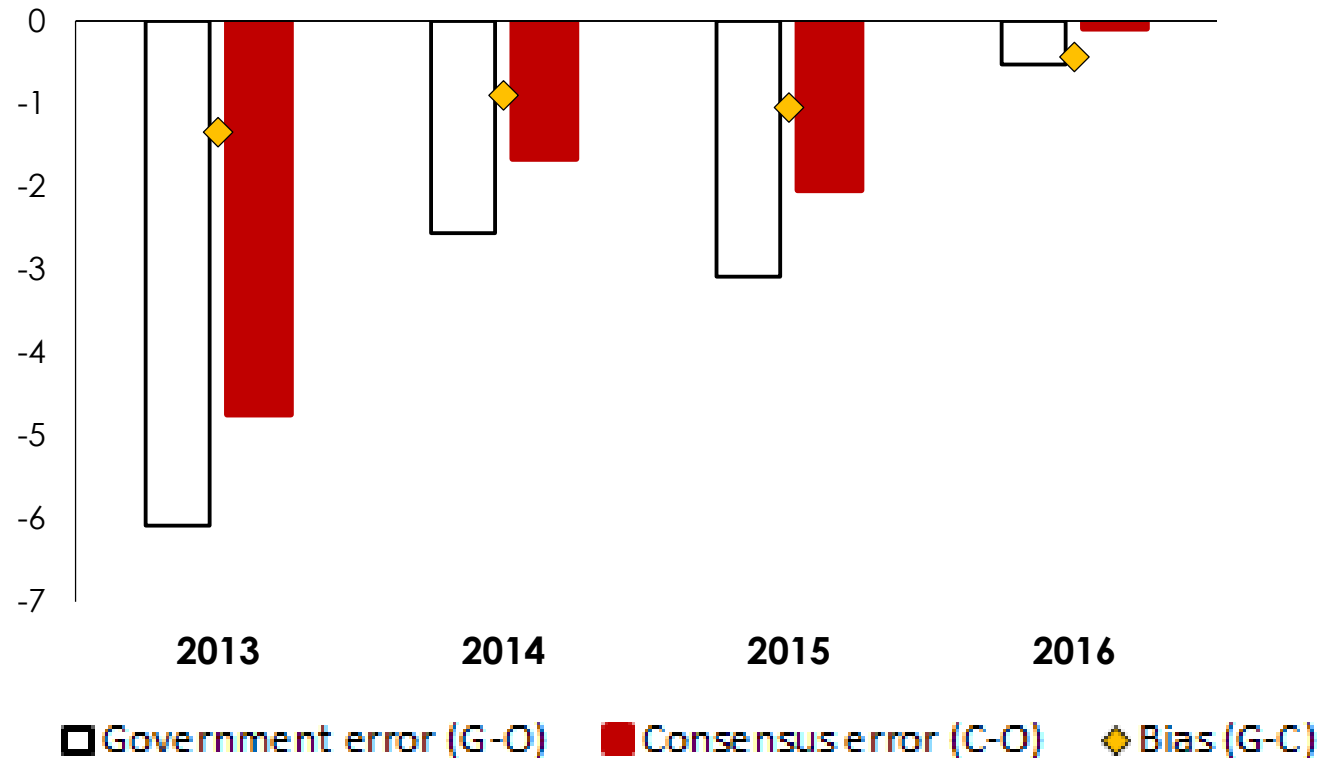

4. Conclusions

2. AIREF's APPROACH

Comparison with outturn data ('justification' criterion)

The explanation lies within the public consumption forecasts. A significant bias is found

Public consumption (% var)

1. Scene-setter

- The economics
- The regulation
- The questions

2. AIREF's approach

- Definition
- Findings
- What's next?

3. IFIs survey

- Main findings

4. Conclusions

2. AIReF's APPROACH

Comparison with outturn data ('justification' criterion)

Forecast bias in DBPs for 2013-2016

	<i>Forecast made in year t for year t+1</i>	
	<i>Large</i>	<i>Large that are unjustified</i>
	%	%
GDP	50	50
Private Consumption	50	50
Public Consumption	100	100
GFCF	75	-
Exports	25	100
Imports	25	-
Unemployment	75	33
Deficit/GDP	75	100

1. Scene-setter

- The economics
- The regulation
- The questions

2. AIReF's approach

- Definition
- Findings
- What's next?

3. IFIs survey

- Main findings

4. Conclusions

2. AIReF's APPROACH

Comparison with outturn data ('justification' criterion)

Forecast bias in DBPs for 2013-2016

	<i>Forecast made in year t for year t+1</i>		<i>All forecasts (including in-year)</i>	
	<i>Large</i>	<i>Large that are unjustified</i>	<i>Large</i>	<i>Large that are unjustified</i>
	<i>%</i>	<i>%</i>	<i>%</i>	<i>%</i>
GDP	50	50	50	50
Private Consumption	50	50	25	50
Public Consumption	100	100	63	100
GFCF	75	-	75	17
Exports	25	100	25	100
Imports	25	-	38	33
Unemployment	75	33	50	50
Deficit/GDP	75	100	50	100

1. Scene-setter

- The economics
- The regulation
- The questions

2. AIReF's approach

- Definition
- Findings
- What's next?

3. IFIs survey

- Main findings

4. Conclusions

2. AIReF's APPROACH

1. Scene-setter

- The economics
- The regulation
- The questions

2. AIReF's approach

- Definition
- Findings
- What's next?

3. IFIs survey

- Main findings

4. Conclusions

- Directive and national legislation are vague
- AIReF issued a recommendation:
 - Asking the Ministry to adopt and make public necessary actions to correct the significant biases detected
- Ministry of Economy's reply:
 - If there is a bias in public consumption, the government's projection is substituted by the closest value of the IQ's range

2. AIREF's APPROACH

The proposed solution is not fully satisfactory
There is better information available

*Public consumption forecast for year $t+1$ and outturn
(% change, volume)*

-- Consensus IQ range
— Budgetary estimation

— Government's forecast
● Outturn

1. Scene-setter

- The economics
- The regulation
- The questions

2. AIREF's approach

- Definition
- Findings
- What's next?

3. IFIs survey

- Main findings

4. Conclusions

2. AIReF's APPROACH

1. Scene-setter

- The economics
- The regulation
- The questions

2. AIReF's approach

- Definition
- Findings
- What's next?

3. IFIs survey

- Main findings

4. Conclusions

- The proposed solution has some limitations:
 - There is better available information
 - It is the utmost discretionary variable in the macro forecasts: government should be best-placed institution to forecast it
 - If government's forecasts for public consumption are to be substituted by the consensus forecasts, why not ultimately the rest of macro variables?
- So... what now?

3. IFIs SURVEY

1. Scene-setter

- The economics
- The regulation
- The questions

2. AIReF's approach

- Definition
- Findings
- What's next?

3. IFIs survey

- Main findings

4. Conclusions

- 9 IFIs conduct specific ex-post bias assessment
 - 3 of them produce the forecasts themselves, different exercise
 - Out of the remaining 6
 - Benchmark varies (previous vintages, outturn values, first-released data, other forecasters' projections)
 - Variables examined also vary (main macro and fiscal variables, just GDP and inflation, different set of variables each year)
- The remaining IFIs:
 - Endorsement exercise sometimes includes an assessment of biases or a comparison with other independent forecasters
 - Some evaluate their own performance when assessing government's forecasts

4. CONCLUSIONS

1. SCENE-SETTER

- The economics
- The regulation
- The questions

2. AIREF'S APPROACH

- Definition
- Findings
- What's next?

3. IFIs SURVEY

- Main findings

4. CONCLUSIONS

- When forecasts underpinning the budget are endorsed (not produced) by IFIs, the assessment of biases is far from straightforward
- This is so in what concerns:
 - Definition of significant biases
 - Enforcement of recommendations that may ensue the detection of biases
- Useful for IFIs to agree on some common principles
