

BUSINESS AND CONSUMER SURVEY RESULTS

**** Important notice: As of this month, the composition of the consumer confidence indicator is revised. Since consumer confidence is one of five components of the Economic sentiment indicator (ESI), the latter is slightly revised accordingly. More information on the new methodology can be found here: [A revised Consumer Confidence Indicator](#).

In addition, Irish survey data is included for the first time in more than ten years in the European aggregates. For past observations, the Irish data partly consists of reconstructed series. More information on this is available in the last release of the European Business Cycle Indicators (EBCI).

Lastly, the annual updating of country weights and the inclusion of 2018 in the standardisation sample (1990 - 2018) of the ESI has resulted in slight revisions to previous periods. The combined effect of these changes on the ESI for December 2018 is an upward revision by 0.1 points to 107.4 in the euro area and a downward revision by 0.1 points to 107.5 in the EU. ****

January 2019: Economic Sentiment decreases markedly in both the euro area and the EU

In January 2019, the *Economic Sentiment Indicator* (ESI) decreased markedly in both the euro area (by 1.2 points to 106.2) and the EU (by 1.4 points to 106.1).

Euro area developments

The deterioration of euro-area sentiment resulted from lower confidence in industry, services and retail trade, while confidence improved in construction and, to a lesser extent, among consumers. Amongst the largest euro-area economies, the ESI rose only in France (+0.5), while it decreased in Germany (-0.8) and, more significantly so, in Italy (-1.3) and the Netherlands (-4.1). The ESI remained broadly unchanged in Spain (+0.1).

The strong decrease in **industry confidence** (-1.8) resulted from managers' more pessimistic views on all three components, i.e. *production expectations*, the *current level of overall order books* and the *stocks of finished products*. Managers' assessments of the *past production* and *export order books* – which are not included in the confidence indicator – deteriorated significantly, too. The marked decline in **services confidence** (-1.2) was driven by managers' more pessimistic views on the *past business situation* and *past demand*, while their *demand expectations* remained virtually unchanged. The slight increase in **consumer confidence** (+0.4) reflected households' more positive assessments of both their *past* and *future financial situation*, while their *expectations about the general economic situation* and *their intentions to make major purchases* remained (broadly) stable. The strong decline in **retail trade confidence** (-1.8) resulted from more negative views on both the *present* and *expected business situation* and, to a lesser extent, the adequacy of the *volume of stocks*. Increasing **construction confidence** (+0.9) was fuelled by managers' more optimistic *employment expectations*, while their assessment of the *level of order books* worsened. Finally, **financial services confidence** (not included in the ESI) decreased markedly (-3.1), reflecting strong deterioration in managers' *demand expectations* and their assessment of the *past business situation*, while appraisals of *past demand* remained virtually unchanged.

Employment plans saw a significant improvement in construction and a slight improvement in retail trade, while employment plans somewhat worsened in services and deteriorated strongly in industry. **Selling price expectations** increased slightly in services, while they decreased in retail trade, construction and, more importantly so, in industry. Also consumer price expectations dropped in January.

EU developments

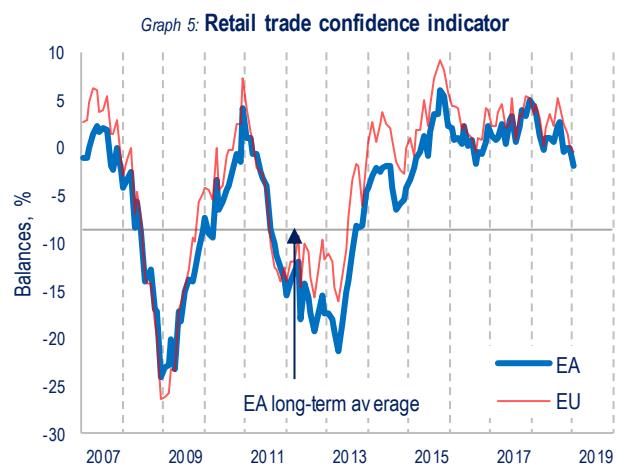

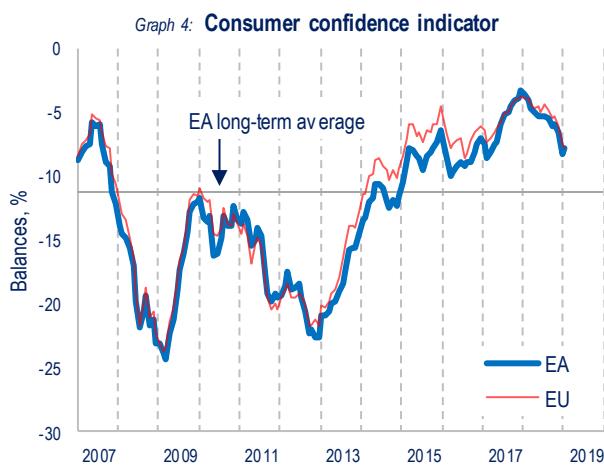

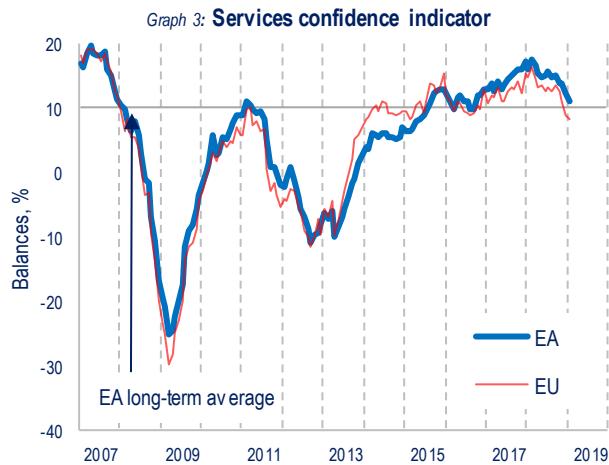

The marginally stronger decline of the headline indicator for the EU (-1.4%) was mainly due to the strong deterioration of sentiment in the largest non-euro area EU economies, the UK (-1.7%) and Poland (-3.6%). While industry confidence worsened markedly in line with the euro area, the deterioration of EU confidence in services and retail trade was less marked than in the euro area. In contrast with euro-area developments, EU confidence in construction and among consumers remained broadly stable. As regards financial services confidence, the drop in the EU aggregate was in line with euro-area developments.

Managers' employment expectations were in line with those for the euro area for industry and services, where they worsened. In contrast to the euro area, employment expectations also weakened in retail trade and construction. Price expectations declined in line with those for the euro area in industry and construction, while, in contrast to the euro area, they decreased strongly in retail trade and edged down in services.

Quarterly survey results (conducted in January)

In the euro-area manufacturing sector, the estimated rate of *capacity utilisation* remained stable at $83.6\%^1$. At the same time, the share of managers assessing their *current production capacity* as 'more than sufficient' (in view of current order books and demand expectations) increased markedly (+3.0 points). While the estimated *number of months' production assured by orders on hand* edged up by 0.1 months, assessments of *new orders* deteriorated markedly (-6.4 points). On the external side, managers' *export volume expectations* worsened strongly (-4.3 points), as did the assessment of their *competitive position on foreign markets outside the EU over the past three months* (-3.4 points) compared to October. EU-wide developments were qualitatively in line; the rate of *capacity utilisation* also remained unchanged, at 83.2% .

In January 2019, capacity utilisation in services increased in the euro area (+0.6 points to 90.7%) and the EU (+0.4 points to 90.0%).²

¹ The rates of capacity utilisation in the manufacturing sector in the euro area and the EU were revised due to the inclusion of Irish data in the aggregates. In 2018 Q4, the effect of this change is a downward revision by 0.3 percentage points to 83.6% in the euro area and by 0.2 percentage points to 83.2% in the EU.

² For the services sector, Irish data on capacity utilisation is not (yet) included in the European aggregates; the series have therefore not been revised.

In the tables: (s.a.) = seasonally adjusted, (n) = not seasonally adjusted, : = not available.

(*) Minimum, maximum and averages are calculated over the period of availability which is not necessarily as from 01/1990.

The economic sentiment indicator is composed of the industrial confidence indicator (40%), the service confidence indicator (30%), the consumer confidence indicator (20%), the construction confidence indicator (5%), and the retail trade confidence indicator (5%). Its long term average (1990-2018) equals 100. The reported ESI average is based on this standardisation sample. All confidence indicators are balances.

The country weights have been updated in January 2019.

(*) Minimum, maximum and averages are calculated over the period of availability which is not necessarily as from 1990.

(a) Answers to the questions whether, taking into account the level of order-books or production, capacity is more than sufficient (+),

sufficient (=) or less than sufficient (-). Thus, negative balances (capacity less than sufficient) indicate high levels of capacity utilisation,

(b) Balances: i.e. differences between the percentages of respondents giving positive and negative replies.

(a) The indicator is the arithmetic average of the balances (%) for the questions on business situation and recent and expected evolution of demand.

(*) Minimum, maximum and averages are calculated over the period of availability which is not necessarily as from 01/1990.

TABLE 3a: Quarterly survey of services (s.a.)

(Data collected in January, April, July and October each year.)

Capacity utilisation in services (%)

(a) The indicator is the arithmetic average of the balances (%) for the present and the future business situation, and for stocks – with inverted sign.

(b) United Kingdom: refers to the volume of sales for the time of the year.

(*) Minimum, maximum and averages are calculated over the period of availability which is not necessarily as from 01/1990.

(a) Data are not seasonally adjusted.

(b) The confidence indicator is the arithmetic average of the balances (%) for the questions on business situation and past and expected evolution of demand.

(c) Component of the confidence indicator.

Information

The Directorate-General Financial and Economic Affairs (DG ECFIN) of the European Commission publishes the Business and Consumer Survey Results every month. The issues of January, April, July and October also include the quarterly survey results for the manufacturing industry and consumers. The April and November issues also include the investment survey results.

The data of the surveys is processed by DG ECFIN's Unit Economic situation, forecasts, business and consumer surveys (A3), Sector Business and consumer surveys and short-term forecast.
