COMMISSION OPINION

of 22.11.2022

on the Draft Budgetary Plan of Lithuania

{SWD(2022) 950 final}

(Only the Lithuanian text is authentic)

COMMISSION OPINION

of 22.11.2022

on the Draft Budgetary Plan of Lithuania

(Only the Lithuanian text is authentic)

GENERAL CONSIDERATIONS

1. Regulation (EU) No 473/2013 sets out provisions for enhanced monitoring of budgetary policies in the euro area, to ensure that national budgets are consistent with the economic policy guidance issued in the context of the Stability and Growth Pact and the European Semester for economic policy coordination.
2. Article 6 of Regulation (EU) No 473/2013 requires Member States to submit annually to the Commission and to the Eurogroup a Draft Budgetary Plan by 15 October, presenting the main aspects of the budgetary outlook of the general government and its subsectors for the forthcoming year.
3. The general escape clause of the Stability and Growth Pact has been active since March 2020.¹ On 23 May 2022, the Commission indicated, in its Communication on the European Semester², that heightened uncertainty and strong downside risks to the economic outlook in the context of war in Europe, unprecedented energy price hikes and continued supply chain disturbances warrant the extension of the general escape clause of the Stability and Growth Pact through 2023 and it considered that the conditions to deactivate it as of 2024 were met. The continued activation of the general escape clause in 2023 will provide the space for national fiscal policy to react promptly when needed, while ensuring a smooth transition from the broad-based support to the economy during the pandemic times towards an increasing focus on temporary and targeted measures and fiscal prudence required to ensure medium-term sustainability.³
4. The Recovery and Resilience Facility, as established by Regulation (EU) 2021/241, provides financial support for the implementation of reforms and investment, notably to promote the green and digital transitions, thereby strengthening the economies' resilience and potential growth. Part of this support is in the form of non-repayable financial support ("grants"), entailing a fiscal impulse financed by the Union. Together with cohesion policy funds and the Just Transition Mechanism, the RRF is supporting a fair and inclusive recovery in the EU in line with the European Pillar of Social Rights. It also boosts growth and job creation in the medium and long term, and thereby strengthens sustainable public finances. According to the Commission proposal of 18 May 2022⁴, the Facility should also aim at increasing the resilience of

¹ Communication from the Commission to the Council on the activation of the general escape clause of the Stability and Growth Pact, COM(2020) 123 final of 20 March 2020.

² COM(2022) 600 final.

³ On 17 June 2022, the Council agreed its recommendations on the 2022 National Reform Programmes and the opinions on the 2022 Stability and Convergence Programmes, which takes into account the continuation of the Stability and Growth Pact's general escape clause into 2023. (See: <https://www.consilium.europa.eu/en/meetings/ecofin/2022/06/17/>)

the Union energy system by reducing dependence on fossil fuels and diversifying energy supplies at Union level ('REPowerEU objectives').

5. On 12 July 2022, in the recommendations delivering Council opinions on the 2022 Stability Programmes⁵, the Council recalled that the overall fiscal stance is currently best measured as the change in primary expenditure (net of discretionary revenue measures and excluding temporary emergency measures related to the COVID-19 crisis), including expenditure financed by non-repayable support (grants) from the Recovery and Resilience Facility and other Union funds, relative to medium-term potential growth.⁶ Going beyond the overall fiscal stance, in order to assess whether national fiscal policy is prudent and its composition is consistent with the green and digital transitions, energy security and ensuring social and economic resilience, attention is also paid to the evolution of nationally financed⁷ primary current expenditure (net of discretionary revenue measures and excluding temporary emergency measures related to the COVID-19 crisis) and investment.
6. The shocks unleashed by the Russian invasion of Ukraine are impacting the EU economy both directly and indirectly, setting it on a path of lower growth and higher inflation. Intensifying and broadening inflationary pressures have been prompting faster normalisation of monetary policy in the euro area. Public spending on measures containing the social and economic impact of high energy costs, on security and defence and on humanitarian assistance to the displaced persons from Ukraine is weighing on public finances. The specific nature of the macroeconomic shock imparted by Russia's invasion of Ukraine, as well as its long-term implications for the EU's energy security needs, call for a careful design of fiscal policy in 2023. A broad-based fiscal impulse to the economy in 2023 does not appear warranted. The focus should instead be on protecting the vulnerable, allowing automatic stabilisers to operate and providing temporary and targeted measures to mitigate the impact of the energy crisis and to provide humanitarian assistance to people fleeing from Russia's invasion of Ukraine, while maintaining the agility to adjust, if needed. Fiscal policy should combine higher investment with controlling the growth in nationally financed primary current expenditure. Full and timely implementation of the Recovery and Resilience Plans is key to achieving higher levels of investment. Fiscal policies should aim at preserving debt sustainability as well as raising the growth potential in a sustainable manner, thus also facilitating the task of monetary policy to ensure the timely return of inflation to the ECB's 2% medium-term target. Fiscal plans for 2023 should be anchored by prudent medium-term adjustment paths reflecting fiscal sustainability challenges associated with high debt-to GDP levels that have increased further due to the pandemic as well as reforms and investment challenges associated with the twin transition, energy security and social and economic resilience.
7. Russia's war of aggression against Ukraine has resulted in substantial additional increases in and volatility of the prices of energy. The price shock in imported energy implies a substantial terms-of-trade loss to Member States' economies. In parallel,

⁵ Council Recommendation of 12 July 2022 on the National Reform Programme of Lithuania and delivering a Council opinion on the 2022 Stability Programme of Lithuania, OJ C 334, 1.9.2022, p. 120.

⁶ The estimates on the fiscal stance and its components in this Opinion are Commission estimates based on the assumptions underlying the Commission 2022 autumn forecast. The Commission's estimates of medium-term potential growth do not include the full positive impact of reforms that are part of the Recovery and Resilience Plan and that can boost potential growth.

⁷ Not financed by grants under the Recovery and Resilience Facility or other Union funds.

the exceptionally high temperatures in summer 2022 pushed up demand for electricity, while, at the same time, energy production from certain technologies has been significantly below historical levels due to technical and weather-dependant circumstances. All Member States have been negatively affected by the current energy crisis, albeit to a different extent, calling for a rapid and coordinated response.

8. Given that budgetary resources are limited and need to be used in the most efficient way, in order to manage a durable and equitable adjustment across society, the quality and design of the policy response is highly important. Therefore, also in line with the Council Regulation on an emergency intervention to address high energy prices adopted on 6 October 2022, measures should focus on providing temporary support, targeted to households and firms most vulnerable to energy price increases, while maintaining the right incentives to reduce energy demand and increase energy efficiency, in line with the European Green Deal.⁸ Policies should also help reducing the energy consumption and develop the energy autonomy of the Union.

CONSIDERATIONS CONCERNING LITHUANIA

9. On 17 October 2022, Lithuania submitted the Draft Budgetary Plan for 2023. On that basis, the Commission has adopted the following opinion in accordance with Article 7 of Regulation (EU) No 473/2013.
10. On 12 July 2022, the Council recommended that Lithuania⁹ take action to ensure in 2023 that the growth of nationally financed primary current expenditure is in line with an overall neutral policy stance¹⁰, taking into account continued temporary and targeted support to households and firms most vulnerable to energy price hikes and to people fleeing Ukraine. Lithuania should stand ready to adjust current spending to the evolving situation. Lithuania was also recommended to expand public investment for the green and digital transitions, and for energy security taking into account the REPowerEU initiative, including by making use of the Recovery and Resilience Facility and other Union funds. For the period beyond 2023, Lithuania should pursue a fiscal policy aimed at achieving prudent medium-term fiscal positions.
11. On 23 May 2022, the Commission issued a report under Article 126(3) TFEU.¹¹ This report assessed the budgetary situation of Lithuania, as its general government deficit in 2022 had been planned to exceed the 3% of GDP Treaty reference value. The report concluded that the deficit criterion was not fulfilled by Lithuania.
12. According to the Commission 2022 autumn forecast, the Lithuanian economy is expected to grow by 2.5% in 2022 and by 0.5% in 2023, while inflation is forecast at 18.9% in 2022 and 9.1% in 2023. According to the Draft Budgetary Plan, Lithuania's economy is expected to grow by 1.6% in 2022 and 1.4% in 2023, while inflation is projected at 17.8% in 2022 and 6.0% in 2023. The divergences between two projections to some extent stem from the fact that the Commission projections are

⁸ Communication from the Commission, the European Green Deal, COM(2019) 640 final.

⁹ Council Recommendation of 12 July 2022 on the National Reform Programme of Lithuania and delivering a Council opinion on the 2022 Stability Programme of Lithuania, OJ C 334, 1.9.2022, p. 120.

¹⁰ Based on the Commission autumn 2022 forecast, the medium-term (10-year average) potential output growth of Lithuania, that is used to measure the fiscal stance, is estimated at 12.4% in nominal terms. The Commission's estimates of medium-term potential growth do not include the full positive impact of reforms that are part of the Recovery and Resilience Plan and that can boost potential growth.

¹¹ Report from the Commission prepared in accordance with Article 126(3) of the Treaty on the Functioning of the European Union, COM(2022) 630 final of 23 May 2022.

based on newer data and incorporate the release of the flash estimate for real GDP growth in 2022 Q3. As compared to the Commission projections, the Draft Budgetary Plan foresees a more positive outlook for private consumption, investment and export for 2023. At the same time, the outlook for inflation for 2023 in the Draft Budgetary Plan, is more contained as compared to the Commission projections, in part due to differences in oil price assumptions. Overall, the macroeconomic assumptions underpinning the Draft Budgetary Plan are cautious for 2022 and more favourable for 2023.

Lithuania complies with the requirement of Regulation (EU) No 473/2013 since the draft budget is based on independently endorsed macroeconomic forecasts.

13. The Draft Budgetary Plan assumes that expenditure amounting to 0.1% of GDP in 2022, 0.8% in 2023 and 1.0% in 2024 will be financed by non-repayable financial support (grants) from the Recovery and Resilience Facility. Expenditures financed by Recovery and Resilience Facility grants will enable high-quality investment and productivity-enhancing reforms without a direct impact on the general government deficit and debt of Lithuania. The Commission 2022 autumn forecast includes a similar amount of expenditures financed by Recovery and Resilience Facility grants.
14. In its 2023 Draft Budgetary Plan, Lithuania's general government deficit is planned to increase from 2.0% of GDP in 2022 to 4.9% of GDP in 2023, mainly due to an increase in general government expenditure on social benefits, public sector wages and discretionary fiscal measures to counter the impact of high energy prices, as well as lower tax revenue due to the increased amount of the non-taxable personal income and losses incurred due to the non-collection of some deferred taxes for businesses disproportionately affected by the high energy prices. The general government debt ratio is planned to increase from 39.1% of GDP in 2022 to 43.0% of GDP in 2023.

These projections are in line with the Commission 2022 autumn forecast. The Commission projects a deficit of 1.9% of GDP in 2022, and, in comparison to the 2023 Draft Budgetary Plan projection, a slightly lower deficit of 4.4% of GDP in 2023. The latter difference stems mostly from the Commission's more cautious assumptions about the growth of the general government's intermediate consumption as well as investment expenditure due to previously observed slower implementation of investment and consumption plans. The general government debt ratio projections in 2022 and 2023 are also somewhat higher than the Commission 2022 autumn forecast, mostly because the Commission projects higher nominal GDP in 2022 and 2023.

The outlook for public finances continues to be subject to the high uncertainty that surrounds the macroeconomic projections, including macroeconomic risks related to the Russian invasion of Ukraine, energy price hikes and continued supply chain disturbances.

15. The Draft Budgetary Plan encompasses an extensive list of discretionary revenue and expenditure measures with a total deficit-increasing effect of 4.4% of GDP in 2022 and 1.7% of GDP in 2023. The Commission takes account of the same measures with similar amounts. In 2022, the deficit-increasing effect is relatively high mostly due to the introduction of costly energy price compensations for businesses and households, increased funding for national security as well as a significant growth of public sector wages. In 2023, the main revenue measures concern raising the amount of non-taxable income applied in the personal income tax formula, revenue losses associated with the projected non-collection of the postponed tax payments for

taxpayers affected by the energy price crisis, and the temporary decrease of the value added tax rate for restaurants, art, culture and sports services and events. Overall, the Draft Budgetary Plan projects the revenue measures to have a deficit-increasing impact of 0.5% of GDP in 2023. The Draft Budgetary Plan does not yet include the tax reforms envisaged in Lithuania's Recovery and Resilience Plan which should help to offset the increases in long-term government spending commitments and make Lithuania's public finances more sustainable. On the expenditure side, the main Draft Budgetary Plan measures for 2023 are temporal subsidies for households and businesses to partially compensate the exceptional increases in electricity and gas prices, targeted salary increases for public sector employees, support to people fleeing Ukraine, and increases in pensions, child benefits and other social benefits (total increase of expenditure by 1.2% of GDP in 2023). Most of the above measures are permanent and not matched by offsetting measures, except for the measures aiming to mitigate the economic and social impact of high energy prices, the temporary decrease of the value added tax rate for restaurants, art, culture and sports services and events, and expenditure on refugees, which might ease over the medium term.

The government deficit is impacted by the measures adopted to counter the economic and social impact of the exceptional increases in energy prices, which aggravated over the course of the summer.¹² The budgetary cost of these measures is projected in the Commission 2022 autumn forecast to amount to 1.5% of GDP in 2022 and 1.5% of GDP in 2023. They consist of measures reducing government revenue, namely, a temporary reduction in the value added tax for central heating for households, and increasing expenditure, such as a partial compensation for the exceptional increases in gas and electricity prices for households and companies. These measures have been announced as temporary, most of them expiring by the end of 2023 or earlier. Most measures do not appear targeted to vulnerable households or firms¹³, and most of them do not fully preserve the price signal to reduce energy demand and increase energy efficiency¹⁴. As a result, the amount of temporary and targeted support to households and firms most vulnerable to energy price hikes, that can be taken into account in the assessment of compliance with the fiscal country-specific recommendation for 2023, is estimated in the Commission 2022 autumn forecast at close to zero.

The government deficit is also impacted by the costs to offer temporary protection to displaced persons from Ukraine, which in the Commission 2022 autumn forecast are projected at 0.3% of GDP in both 2022 and 2023.

16. Based on the Commission 2022 autumn forecast and including the information incorporated in Lithuania's 2023 Draft Budgetary Plan, gross fixed capital formation is expected to amount to 2.9% of GDP in 2022 and 3.6% of GDP in 2023, compared to 3.1% of GDP recorded in 2021. This includes investments for the green and digital transitions and for energy security, such as the installation of energy storage facilities, renovation of public and private buildings to increase its energy efficiency,

¹² Deficit developments in 2023 are also affected by the complete phasing out of COVID-19 emergency temporary measures, which are estimated in the Commission autumn 2022 forecast at 1.0% of GDP in 2022.

¹³ Targeted measures amount to 0.05% of GDP in 2022 and 0.0% of GDP in 2023, while untargeted measures amount to 1.4% of GDP in 2022 and 1.5% of GDP in 2023.

¹⁴ Income measures amount to 0.05% of GDP in 2022 and 0.0% of GDP in 2023, while price measures amount to 1.4% of GDP in 2022 and 1.5% of GDP in 2023.

and creation of a data exchange tool for electronic invoices, which are partly funded by the Recovery and Resilience Facility and other EU funds.

17. In 2023, the fiscal stance is projected in the Commission 2022 autumn forecast to be expansionary (-2.3% of GDP¹⁵). This follows an expansionary fiscal stance in 2022 (-2.3% of GDP).

The growth in nationally financed primary current expenditure (net of new revenue measures) in 2023 is projected to provide an expansionary contribution of 1.1 percentage points.¹⁶ This includes the stable impact from the support measures adopted to counter the economic and social impact of the exceptional increases in energy prices,¹⁷ while temporary and targeted support measures to households and firms most vulnerable to energy price hikes remain limited. Therefore, the expansionary contribution of nationally financed primary current expenditure is not due to the temporary and targeted support to households and firms most vulnerable to energy price hikes and to people fleeing Ukraine. The expansionary growth in nationally financed primary current expenditure (net of new revenue measures) is driven by increases in general government intermediate consumption, permanent increases in social benefits and the growth of public sector wages.

The positive contribution to the economic activity of expenditure financed by Recovery and Resilience Facility grants and other EU funds is projected to increase by 0.6 percentage points of GDP in 2023 compared to 2022. Nationally financed investment is projected to provide an expansionary contribution to the fiscal stance of 0.4 percentage points in 2023.¹⁸

18. The Draft Budgetary Plan includes medium-term budgetary projections until 2025. The government deficit is projected to decrease gradually to 1.8% of GDP in 2024 and 1.4% in 2025. In turn, government debt is envisaged to decline to 41.6% of GDP by 2024 before increasing to 42.1% of GDP in 2025.
19. On 12 July 2022 the Council also recommended Lithuania to foster cooperative public procurement at central government and municipality levels. To address this recommendation Lithuania has prepared a legislative proposal to create a legal basis for centralised public procurements at the central government level and is continuously expanding the activities of the central procurement organization (for example, in 2022, 33 public procurement organizations commissioned the central procurement agency to perform part or all of their public procurement procedures, which is eight organizations more than initially planned).
20. In 2023, based on the Commission's forecast and including the information incorporated in the Draft Budgetary Plan, the overall fiscal policy stance is estimated to be expansionary, in a situation of high inflation. This includes an expansionary contribution to the overall fiscal stance from nationally financed current expenditure. This expansionary contribution is not the result of temporary and targeted support to

¹⁵ A negative (positive) sign of the indicator corresponds to an excess (shortfall) of primary expenditure growth compared with medium-term economic growth, indicating an expansionary (contractionary) fiscal policy. The fiscal stance includes the fiscal impulse funded by the Union.

¹⁶ This follows an expansionary contribution from this component of 2.2 percentage points in 2022.

¹⁷ The budgetary impact of targeted price and income measures is projected to remain stable, while the budgetary impact of untargeted price and income measures is projected to increase by 0.1% of GDP and remain stable respectively.

¹⁸ Other nationally financed capital expenditure is projected to provide an expansionary contribution of 0.2 percentage points of GDP.

households and firms most vulnerable to energy price hikes and the cost to assist people fleeing Ukraine. Overall, the growth of nationally financed primary current expenditure is not in line with the recommendation of the Council. Lithuania plans to finance additional investment through the RRF and other EU funds and it also preserves nationally financed investment. It plans to finance public investment for the green and digital transitions, and for energy security.

Overall, the Commission is of the opinion that the Draft Budgetary Plan for Lithuania is partly in line with the fiscal guidance contained in the Council recommendation of 12 July 2022. The Commission invites Lithuania to take the necessary measures within the national budgetary process to ensure that the 2023 budget is consistent with the recommendation adopted by the Council on 12 July 2022.

While Lithuania rapidly deployed energy measures as part of the emergency policy response to the exceptional energy price hikes, a prolongation of existing and/or an enactment of new support measures in response to high energy prices would contribute to higher growth in net nationally financed current expenditure and to an increase in the projected government deficit and debt in 2023. Therefore, it is important that Member States better focus such measures to the most vulnerable households and exposed firms, to preserve incentives to reduce energy demand, and to be withdrawn as energy price pressures diminish.

The Commission is also of the opinion that Lithuania has made some progress with regard to the structural part of the fiscal recommendations contained in the Council Recommendation of 12 July 2022 in the context of the European Semester and thus invites the authorities to accelerate progress. A comprehensive description of progress made with the implementation of the country-specific recommendations will be made in the 2023 Country Report and assessed in the context of the country-specific recommendations to be proposed by the Commission in spring 2023.
