source: European Commission services

April 2017: Economic Sentiment increases markedly in both the euro area and the EU

In April, the *Economic Sentiment Indicator* (ESI) increased markedly by 1.6 points in the euro area (to 109.6), and by 1.4 points in the EU (to 110.6),¹ reaching the highest levels since August (euro area) and September (EU) 2007.

Euro area developments

Improved euro-area sentiment resulted from marked increases in confidence in all sectors, namely industry, services, construction, retail trade and among consumers. Moreover, the ESI rose in all of the five largest euro-area economies, most strongly so in Germany (+1.8), Italy (+1.4) and France (+1.2), followed by Spain (+1.0) and the Netherlands (+0.8).

Increasing **industry confidence** (+1.3) resulted from managers' more upbeat assessment of the *current level of overall order books* and healthier assessments of the *stocks of finished products*; managers' *production expectations* remained broadly unchanged. Of the questions not included in the confidence indicator, both managers' appraisal of *export order books* and, in particular, *past production* improved. The rise in **services confidence** (+1.4) resulted from managers' significantly brighter assessment of *past demand*, and to a lesser extent, the *past business situation*, while their *demand expectations* remained broadly unchanged. The increase in **consumer confidence** (+1.4) was fuelled by significantly brighter expectations regarding *future unemployment*, the *future general economic situation* and households' *future financial situation*. By contrast, consumers were less optimistic about their *savings expectations*. The increase in **retail trade confidence** (+1.4) resulted from more positive views on both the *present* and *expected business situation*, while managers' assessment of the adequacy of the *volume of stocks* slightly deteriorated. The strong rise in **construction confidence** (+3.7) was fuelled by upward revisions in both managers' *employment expectations* and their assessment of the level of *order books*. Finally, the fall (-2.6) in **financial services confidence** (not included in the ESI) resulted from worse appraisals of expected demand and, in particular, both the *past business situation* and *past demand*.

Employment plans saw significant upward revisions in construction, retail trade, industry and services. **Selling price expectations** increased markedly in construction, and to a lesser extent in services and retail trade, while they cooled off in industry. Also consumer price expectations saw a dent in April.

EU developments

The marginally less optimistic outcome for the EU ESI (+1.4) owes mainly to a broadly unchanged sentiment in the largest non-euro area EU economy, the UK (+0.3), while the ESI increased markedly also in Poland (+1.1). In line with the euro area, confidence improved in all sectors in the EU, though the improvements were somewhat less pronounced in retail trade, construction and among consumers.

EU managers were also more cautious about their employment plans in industry, services and retail trade. Price expectations were broadly in line with those for the euro area, except in industry and retail trade where the outlook on prices remained broadly unchanged.

¹ The business confidence indices for France were revised compared to the March press release, causing an upward revision of the ESI for March of 0.1 points in both the euro area (to 108.0) and the EU (to 109.2).

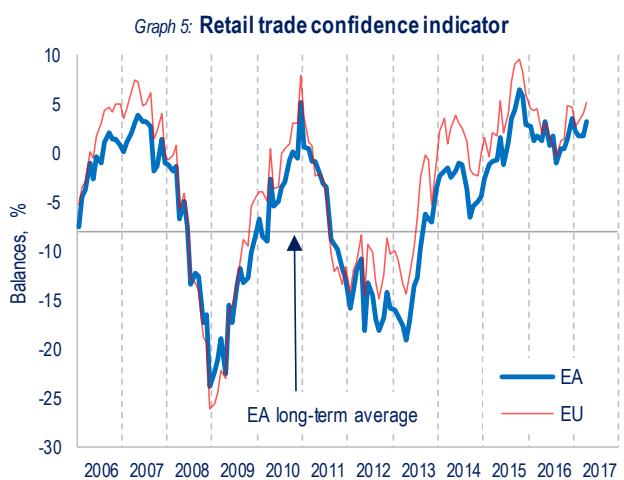

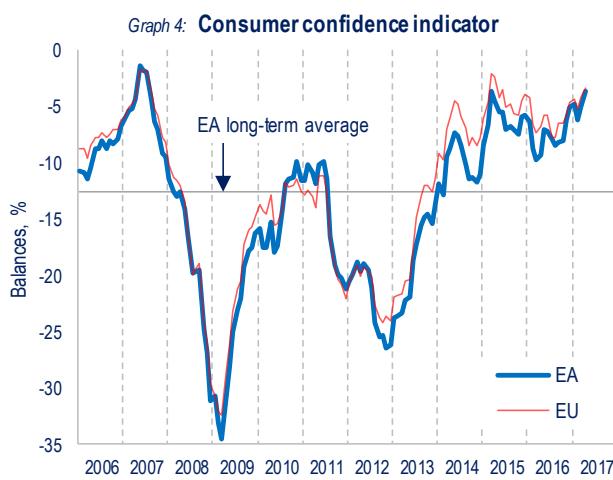

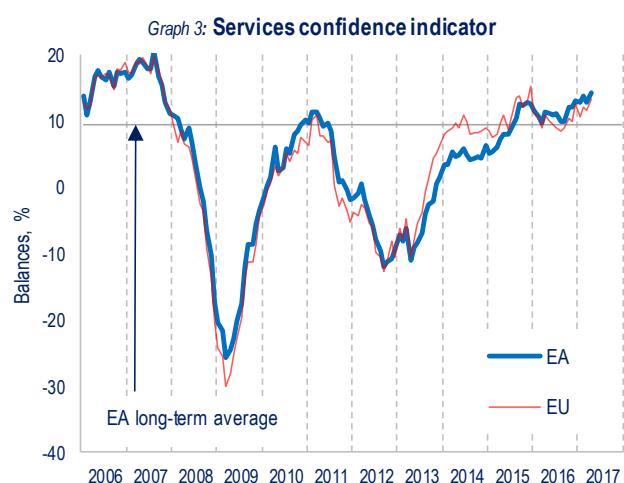

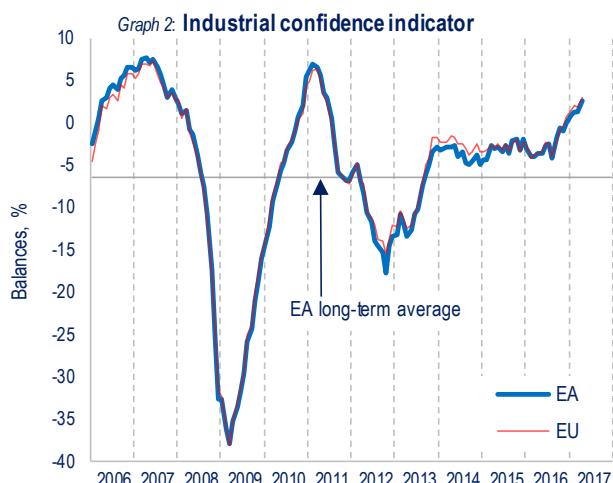

Quarterly survey results (conducted in April)

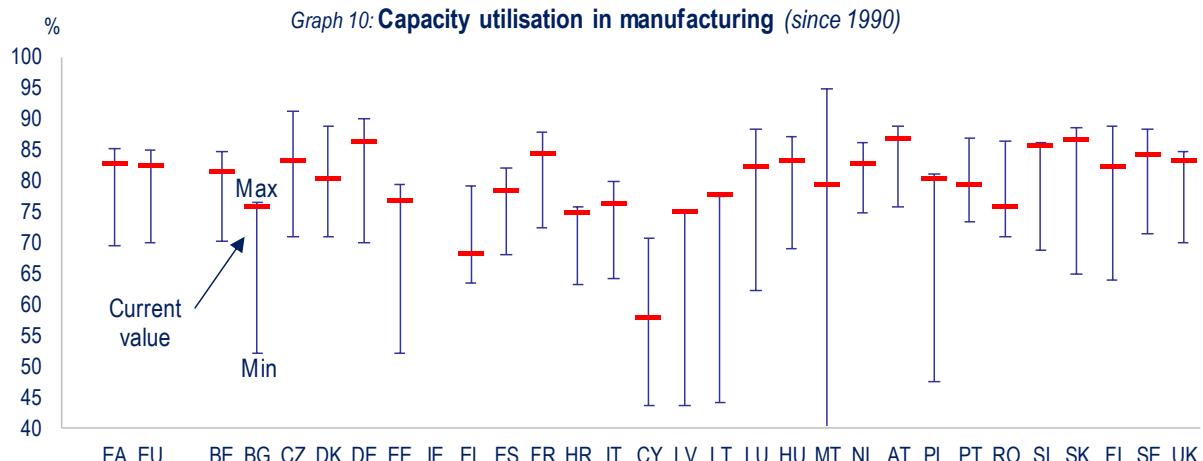

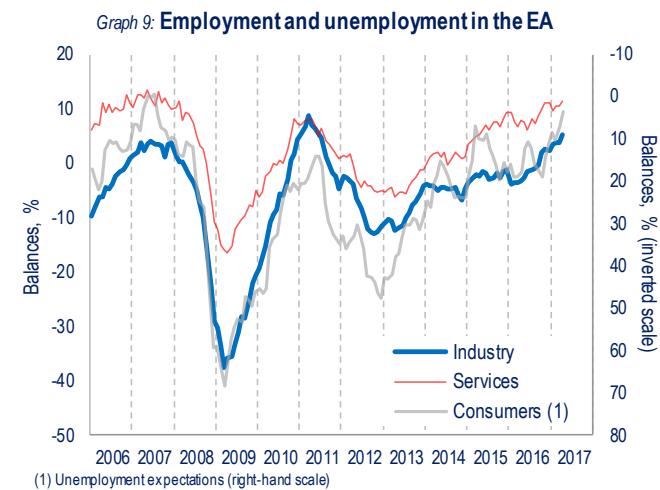

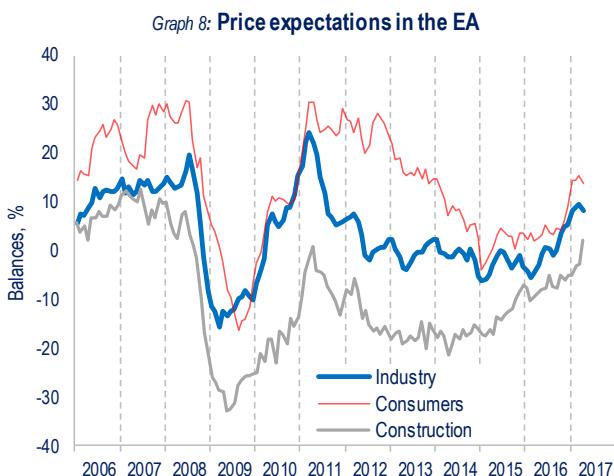

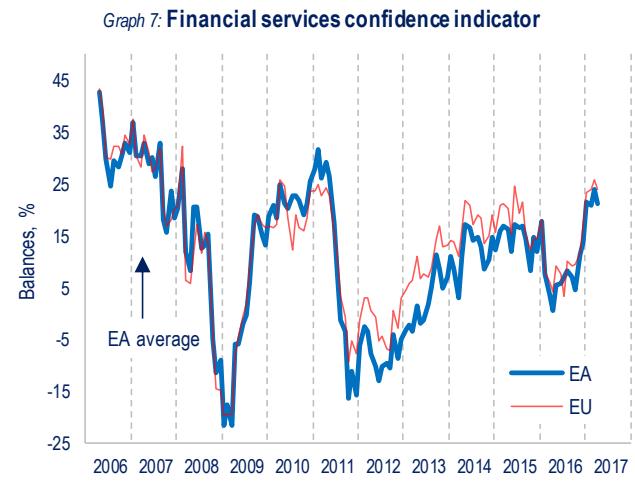

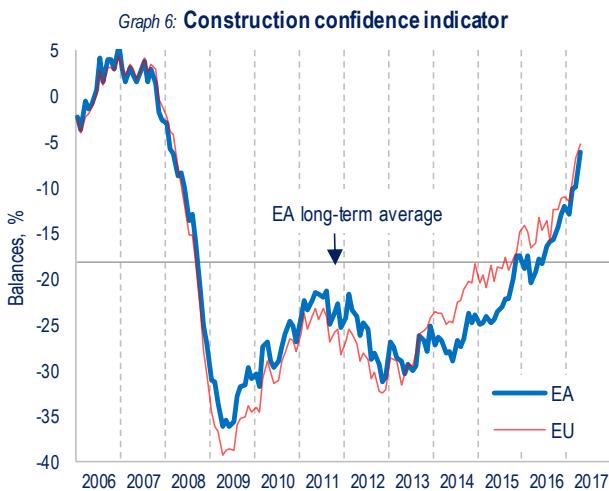

In the euro area manufacturing sector, the estimated rate of *capacity utilisation* increased marginally to 82.6% (0.1 points higher than in January). The share of managers assessing their *current production capacity* as 'more than sufficient' (in view of current order books and demand expectations) decreased (-1.9) accordingly. On the external side, managers' *export volume expectations* were stable (0.0) while assessments of their *competitive position on foreign markets outside the EU over the past three months* improved compared with the previous survey carried out in January (by 0.7 points). Finally, managers' appraisal of developments in *new orders* improved markedly (by 3.8 points) and the estimated *number of months' production assured by orders on hand* edged up by 0.1 compared to January. Results in the wider EU were more optimistic than in the euro area regarding *capacity utilisation* (+0.3 points), *competitive position on foreign markets outside the EU* (+1.1) and the estimated *number of months' production assured by orders on hand* (+0.5); at the same time EU managers' *export volume expectations* weakened in April.

Compared to January, capacity utilisation in services was unchanged in the euro area (at 89.4%) and increased in the EU (by 0.3 points to 89.6%) in April.

Industrial investment survey (conducted in March/April)

According to the bi-annual investment survey carried out in March/April, real investment in the manufacturing industry is expected to increase by 5% in the euro area in 2017, thus by 2 percentage points more than according to the last survey conducted in October/November 2016. As for real investment in 2016, managers now estimate it to have increased by 2%, 1 percentage point above their expectation in the October/November survey. In the EU, real investment growth in manufacturing is expected to reach 4% in 2017, 1 percentage point higher than surveyed in October/November 2016. As regards 2016, the current estimation points to a 4% increase, up from 3% as estimated in October/November.

In the tables: (s.a.) = seasonally adjusted, (n) = not seasonally adjusted, : = not available.

(*) Minimum, maximum and averages are calculated over the period of availability which is not necessarily as from 01/1990.

The economic sentiment indicator is composed of the industrial confidence indicator (40%), the service confidence indicator (30%), the consumer confidence indicator (20%), the construction confidence indicator (5%), and the retail trade confidence indicator (5%). Its long term average (1990-2016) equals 100. The reported ESI average is based on this standardisation sample. All confidence indicators are balances.

The country weights have been updated in January 2017.

(a) Business surveys for Ireland have been temporarily discontinued as from 05/2008.

(*) Minimum, maximum and averages are calculated over the period of availability which is not necessarily as from 01/1990.

(a) The indicator is the arithmetic average of the balances (%) of the questions on production expectations, order-books and stocks (the last with inverted sign).

(b) Highest figure is considered as a minimum, lowest figure is considered as a maximum.

TABLE 2a: Quarterly survey of manufacturing industry (s.a.)

(Data collected in January, April, July and October each year.)

Capacity utilisation in manufacturing industry (%)

(*) Minimum, maximum and averages are calculated over the period of availability which is not necessarily as from 1990.

(a) Answers to the questions whether, taking into account the level of order-books or production, capacity is more than sufficient (+), sufficient (=) or less than sufficient (-). Thus, negative balances (capacity less than sufficient) indicate high levels of capacity utilisation, whereas positive balances (capacity more than sufficient) are associated with low levels of capacity utilisation.

(b) Balances: i.e. differences between the percentages of respondents giving positive and negative replies.

(a) Balances are the weighted averages of the percentages of answers describing each factor as 'very stimulating' (coefficient 1), 'stimulating' (0.5), 'limiting' (-0.5) and 'very limiting' (-1). The answers which do not mention any of these descriptions are not taken into account in calculating these percentages.

(b) The main technical factors are technological developments, the availability of labour and its attitude towards new technologies, and the technical conditions set by the public authorities before they grant the investment permit.

(a) The indicator is the arithmetic average of the balances (%) for the questions on business situation and recent and expected evolution of demand.

(*) Minimum, maximum and averages are calculated over the period of availability which is not necessarily as from 01/1990.

TABLE 3a: Quarterly survey of services (s.a.)

(Data collected in January, April, July and October each year.)

(a) The indicator is the arithmetic average of the balances (%) for the present and the future business situation, and for stocks – with inverted sign.

(b) United Kingdom: refers to the volume of sales for the time of the year.

(*) Minimum, maximum and averages are calculated over the period of availability which is not necessarily as from 01/1990.

(a) Data are not seasonally adjusted.

(b) The confidence indicator is the arithmetic average of the balances (%) for the questions on business situation and past and expected evolution of demand.

(c) Component of the confidence indicator.

Information

The Directorate-General Financial and Economic Affairs (DG ECFIN) of the European Commission publishes the Business and Consumer Survey Results every month. The issues of January, April, July and October also include the quarterly survey results for the manufacturing industry and consumers. The April and November issues also include the investment survey results.

The data of the surveys is processed by DG ECFIN's Unit Economic situation, forecasts, business and consumer surveys (A3), Sector Business and consumer surveys and short-term forecast.
